

PURI | SHARMA | PATHANIA'S

GRADUATE PHYSICAL CHEMISTRY

(VOLUME - I)

(for B.Sc. 1st year students of
U.P. (Unified) and other Indian Universities)

(Strictly as per UGC curriculum)

Dr. B.S. LARK

Former Professor and Head,
Department of Chemistry,
Guru Nanak Dev University, AMRITSAR (Pb.)

Future for WINNERS

VISHAL PUBLISHING CO.

JALANDHAR - DELHI

CONTENTS

1. MATHEMATICAL CONCEPTS	1–80		
1. Logarithms and Logarithmic Functions		7.7. Permutations : (Various Formulae)	
1.1. Common and Natural Logarithms		7.8. Combinations : (Various Formulae)	
1.2. Laws of Logarithms		7.9. Diagonals of a Polygon	
1.3. Log Tables		8. Probability	
1.4. Antilogarithms and Antilogarithm Tables		Questions and Problems	
2. Curve Sketching, Linear Graphs and Slopes		1 (B). COMPUTERS	1–32
2.1. Curves and Slopes		1. Introduction	
2.2. Inclination of a Line and The Slope of a Line		1.1. Type of Computers	
2.3. Drawing The Graphs of Linear Equations		1.2. Classification	
3. Calculus		2. Development of Computers	
3.1. Conceptual Dialogue 1: Differentiation		3. Algorithms and Flow Charts	
3.2. Steps for ab Initio Differentiation		4. Different Components of a Computer	
3.3. Differentiation Rules		5. Hardware and Software	
3.4. Differentials (Derivatives) dy/dx i.e., $f'(x)$ of Some Functions		6. The Binary Number Systems	
3.5. Successive or Higher Order Differentiation		7. Decimal to Binary Conversion	
3.6. Maximum and Minimum		8. Other Number Systems	
4. Partial Differentiation		9. Conversion of a Number From any Other System to Decimal System	
4.1. Higher Order Partial Derivatives		10. Octal to Binary Conversion	
4.2. The Euler Reciprocal (Reciprocity) Relation		11. Binary Arithmetic	
4.3. The Euler Chain Relation (The Cyclic Rule)		12. Programming	
4.4. Miscellaneous Problems of Partial Derivation		12.1. Algorithm	
5. Integration		12.2. Flow Charts	
5.1. Definite Integrals		12.3. Introduction to Computer Programming Languages	
5.2. Methods of Integration		13. Operating Systems	
6. Factorial Notation		13.1. Batch Operating Systems	
7. Permutations and Combinations		13.2. Personal Computer Operating Systems	
7.1. Fundamental Principal of Counting/ Association		13.3. The UNIX Operating System	
7.2. Permutations		13.4. Microkernel Based Operating System	
7.3. Permutations for N Objects Taken All at a Time (${}^n P_n$)		Questions and Problems	
7.4. Permutations of n Objects Out of Which R are To Be Selected ${}^n P_r$		2. THE GASEOUS STATE	1–64
7.5. Conceptual Corrolary		1. The Kinetic Molecular Theory of Gases	
7.6. Combinations		1.1. Postulates of Kinetic Molecular Theory	
		1.2. Justification for The Postulates	
		1.3. Pressure of an Ideal (or Perfect) Gas- Kinetic Gas Equation	
		2. Kinetic Energy and Temperature	
		3. Derivation of Gas Laws	

- 3.1. Boyle's Law
 - 3.2. Charle's Law
 - 3.3. Avogadro's Law
 - 3.4. The Ideal Gas Equation
 - 3.5. Graham's Law of Diffusion
 - 3.6. Dalton's Law of Partial Pressures
 - 4. Thermal Motion of The Molecules
 - 5. Real Gases
 - 5.1. Deviations of Real Gases From Ideal Behaviour and Compressibility Factor
 - 5.2. Compressibility of Various Gases
 - 5.3. Effect of Temperature on Deviations from Ideal Behaviour
 - 5.4. Explanation for The Deviations
 - 6. The van der Waals Equation of State
 - 6.1. Correction due to Volume of Gas Molecules
 - 6.2. Correction Due to Intermolecular Forces of Attraction
 - 6.3. Calculation of the Correction Factor, p .
 - 6.4. van der Waals Gas Equation for One Mole of A Real Gas
 - 6.5. van der Waals Gas Equation for n Moles of a Gas
 - 6.6. Units For The van der Waals Constants
 - 6.7. Significance of van der Waals Constants
 - 6.8. Discussion of The van der Waals Equation
 - 7. Other Equations of State
 - 7.1. Dieterici Equation
 - 7.2. Berthelot Equation
 - 7.3. Clausius Equation
 - 7.4. Radlich-Kwong Equation
 - 7.5. The Virial Equation of State
 - 8. Critical Constants of a Gas
 - 8.1. Determination of Critical Constants
 - 8.2. The P-V Isotherms of Carbon Dioxide
 - 8.3. Continuity of State
 - 8.4. Isotherms of van der Waals Gas and Co-Relations Between Critical Constants and van der Waals Constants
 - 8.5. Critical Compressibility Factor
 - 8.6. Determination of van der Waals Constants a and b From Critical Data
 - 9. The Principle of Corresponding States and Reduced Equation of State
 - 10. Molecular Velocities
 - 10.1. Maxwell's Law of Distribution of Molecular Velocities
 - 10.2. Effect of Temperature on Distribution of Molecular Velocities
 - 10.3. Types of Molecular Velocities
 - 10.4. Collision Diameter
 - 10.5. Collision Number
 - 10.6. Collision Frequency
 - 10.7. Collision Frequency Between Unlike Molecules
 - 10.8. Number Density of an Ideal Gas (n^*)
 - 10.9. Mean Free Path
 - 10.10. Coefficient of Viscosity η and Mean For Path λ of a Gas
 - 11. Liquefaction of Gases
 - 11.1. The Joule-Thomson Effect
 - 11.2. Linde's Apparatus
 - 11.3. Adiabatic Expansion Involving Mechanical Work
 - 11.4. Liquefaction of Helium
 - 11.5. Applications of Liquefied Gases
- Summary
- Questions and Problems
- 3. THE LIQUID STATE 1-40**
- 1. Intermolecular Forces
 - 2. Nature of Molecules and Dipole Moment
 - 2.1. Polar and Non Polar Molecules
 - 2.2. Heteronuclear Diatomic Molecules
 - 2.3. Direction of Dipole Moment
 - 2.4. Polar, Non-Polar and Ionic Molecule
 - 2.5. Percentage Ionic Character
 - 2.6. Dipole Moments of Halogen Acids
 - 2.7. Bond Moments and Dipole Moments of Polyatomic Molecules
 - 2.8. Diploe Moment and *cis-trans*- Isomerism
 - 3. Mixing of Molecules and Intermolecular Interactions
 - 3.1. Induced Dipole-Induced Dipole Interaction
 - 3.2. Dipole-Induced Dipole Interaction
 - 3.3. Dipole-Dipole Interaction
 - 4. Similarity of Various Interactive Energies
 - 5. Repulsive Forces

6. Hydrogen Bonding (H-Bonding)
 - 6.1. Types of H-Bonding
 - 6.2. Consequences of H-Bonding
 7. Unusual Behaviour of Water
 - 7.1. Water in Solid State (Ice) is Lighter Than in Liquid State (Water)
 - 7.2. Density of Water
 - 7.3. Characteristic Properties of Water
 8. Effect of Unusual Behaviour of Water
 9. Miscellaneous Problems
 10. Some Other Weak Intermolecular Forces
 - 10.1. Hydrophobic Interactions
 - 10.2. Aromatic π - π Interactions
 - 10.3. Interactions Involving Ions
 11. Structure of Liquids
 - 11.1. Structure of Liquids and Structural Differences Between Solids, Liquids and Gases
 - 11.2. Hole Theory of Liquids
 - 11.3. The Free Volume in a Liquid
 - 11.4. Radial Distribution Function
 - 11.5. Structure of Simple Liquids
- Summary
- Questions and Problems

4. SOLID STATE

1-48

1. Introduction
2. Difference Between Crystalline and Amorphous Solids
3. Size and Shape of Crystals : Interfacial Angles
 - 3.1. Law of Constancy of Interfacial Angles
4. Symmetry in Crystal Systems
 - 4.1. Plane of Symmetry (σ_n)
 - 4.2. Axis of Symmetry (C_n)
 - 4.3. Centre of Symmetry (I)
 - 4.4. Rotation Reflection Axis of Symmetry (S_n)
 - 4.5. Rotation Inversion Axis of Symmetry
5. Elements of Symmetry of A Cubic Crystal
 - 5.1. Law of Constancy of Symmetry
6. Point Groups
7. Space Lattice and Unit Cell
8. Bravais Lattices
9. Seven Crystal Systems

10. Density of Cubic Crystals
11. Law of Rational Indices
12. Lattice Planes and Their Designation
 - 12.1. Weiss Indices
 - 12.2. Miller Indices
13. Interplanar Spacing in a Crystal System
 - 13.1. Lattice Planes of The Cubic System
 - 13.2. Inter Planar Distance Ratios
14. X-Ray Diffraction
 - Laue Method
15. The Bragg Equation
 - 15.1. Derivation of The Bragg Equation
16. Experimental Methods
17. Powder Method, The Debye – Scherrer Method
18. N Values for Simple Cubic (PRIMITIVE P) Lattice
19. bcc (I) Lattice
 - 19.1. sc vs. bcc Lattice
 - 19.2. Prior Knowledge of a
 - 19.3. fcc Lattice
20. Analysis of Powder Diffraction Pattern of NaCl
 - 20.1. Ions Per Unit Cell/Density of The Crystal
21. Powder Pattern of Potassium Chloride
22. Crystal Structure of Cesium Chloride

Summary

Questions and Problems

5. LIQUID CRYSTALS

1-24

1. Liquid Crystals (Mesomorphic State)
2. Discovery of The Phenomenon
3. Some Terms and Definitions
4. Characteristics and Shapes of Mesogens
5. Order in Liquid Crystals
 - 5.1. Order Parameter (S)
 - 5.2. Variation of Order Parameter S with Temperature
6. Types of Mesomorphism
 - 6.1. Thermotropic Mesomorphism
 - 6.2. Lyotropic Mesomorphism
 - 6.3. Metallotropic Mesomorphism
7. Vapour Pressure – Temperature Diagrams
8. Thermography

9. Classification of Thermotropic Liquid Crystals
 - 9.1. Smectic Liquid Crystals
 - 9.2. Nematic Liquid Crystals
 10. Molecular Arrangements in Various States of Liquid Crystals
 - 10.1. Smectic LC's
 - 10.2. Nematic LC's
 - 10.3. Normal Liquids
 - 10.4. Liquid Crystals in Daily Life
 11. Compounds Exhibiting Both Smectic and Nematic Characters
 12. Cholesteric Liquid Crystals
 13. Disc-Shaped Liquid Crystals
 14. Polymer Liquid Crystals
 15. Polymorphism in Thermotropic Liquid Crystals
 16. The Melting of Nematic Crystals
 17. Pressure-Induced Mesomorphism
 18. Thermochromic Liquid Crystals (TLC)
 19. Liquid Crystal Display (LCD) and Seven Segment Cell
 20. Difference Between Solids/Liquids and Liquids Crystals
 21. Applications of Liquid Crystals
- Summary
- Questions and Problems

6. COLLOIDAL STATE

1-40

1. Introduction
 - 1.1. Colloidal Systems
2. Classification of Colloids
 - 2.1. Classification Based Upon Nature of Interaction
 - Lyophilic Colloids
 - 2.2. Lyophobic Colloids
 - 2.3. Lyophobic vs. Lyophilic Sols
 - 2.4. Classification Based Upon Manner of Aggregation
 - Dispersion Colloids
 - Macromolecular Colloids
 - Association Colloids
 - Micelles
3. True Solutions, Colloidal Solutions and Suspensions
4. Preparation of Colloidal Solutions

- 4.1. Lyophilic Sols
- 4.2. Lyophobic Sols
 - Dispersion Methods
 - Colloid Mill Methods
 - Ultrasonic Generators
 - Electrical Dispersion
 - Preparation
 - Condensation Methods
 - Double Decomposition
 - Oxidation
5. Purification of Colloidal Solutions
 - 5.1. Dialysis
 - 5.2. Ultra-Filtration
6. General Properties of Colloidal Systems
 - 6.1. Heterogeneous Character
 - 6.2. Diffusibility
 - 6.3. Filterability
 - 6.4. Visibility
 - 6.5. Colligative Properties
 - 6.6. Optical Properties
 - 6.7. The Brownian Movement
7. Some Specific Properties of Hydrophobic Colloidal Systems
 - 7.1. Electrical Properties
 - 7.2. The Origin of Charge on Colloidal Particles
 - 7.3. Both Positive and Negative Sols
 - 7.4. Charge on The Colloidal Particle Through Ionization of Colloidal Material
 - 7.5. Electrical Double Layer
8. Stability of Colloids
 - 8.1. Stability of Lyophobic Colloids
 - 8.2. Stability of Lyophilic Colloids
9. Coagulation of Colloidal Sols
 - 9.1. By The Action of Electrolytes
 - Hardy-Schulze rule
 - 9.2. Flocculation Value
 - 9.3. Departures From Hardy Schulze Rule
 - 9.4. Amount of Coagulant and Nature of Coagulation
 - 9.5. Coagulation of Lyophilic Sols
 - 9.6. Lyotropic or Hofmeister Series
 - 9.7. By The Mutual Action of Sols
 - 9.8. By Persistent Dialysis

- 9.9. Coagulation By Mechanical Means
- 10. Protective Colloids
 - Gold Number
- 11. Electrokinetic Properties
 - 11.1. Electrophoresis, Experimental Set Up
 - 11.2. Electrophoretic Mobility
 - 11.3. Electro-Osmosis
- 12. Emulsions (Liquids in Liquids)
 - 12.1. Classification
 - 12.2. Identification of The Type of an Emulsion
 - 12.3. Emulsifiers
 - 12.4. Applications of Emulsions
- 13. Liquids in Solids (GELS)
 - 13.1. Preparation of Gels
 - 13.2. Elastic and Non-Elastic Gels
 - 13.3. Syneresis
- 14. Thixotropy
 - 14.1. Pectization
 - 14.2. Applications
- 15. Colloidal Electrolytes
 - 15.1. Properties of Aqueous Solutions of Colloidal Electrolytes
- 16. Importance and Application of Colloids
- Summary
- Questions and Problems

7. CHEMICAL KINETICS 1-108

- 1. Chemical Kinetics
- 2. Rate of Reaction
 - 2.1. Following Reaction Rate
 - Instantaneous rate
 - Rate determination through physical property
 - 2.2. Expressing Reaction Rates
- 3. Factors Influencing Rates of Reactions
 - 3.1. Effect of The Nature of Reactants and Products
 - 3.2. Effect of Concentration
 - 3.3. Effect of Temperature
 - 3.4. Effect of Catalyst
 - 3.5. Effect of Surface Area of Reactants
 - 3.6. Effect of Radiation

- 3.7. Effect of Pressure
- 3.8. Ultrasound Assisted Reactions
- 3.9. Effect of Solvents
- 3.10. Orientation Effect
- 3.11. Kinetic Isotopic Effect (KIE)
- 4. Significance of Velocity Constant or Rate Constant
- 5. Order of A Reaction
 - 5.1. One Reactant Only
 - 5.2. Two Reactants
 - 5.3. Three Reactants
 - 5.4. Fractional Order Reactions
 - Reactions of Various Order
- 6. Zero Order Reactions
 - 6.1. Some Heterogeneous Zero Order Reactions
 - 6.2. Rate Equation For Zero Order Reactions
 - 6.3. Units of k_0
 - 6.4. Graphical Representation of Zero Order Reactions
 - 6.5. Summary of Kinetic Data of Zero Order Reactions
- 7. First Order Reactions
 - 7.1. Some Characteristics of I Order Reactions
 - 7.2. Units of k_1
 - 7.3. Examples of First Order Reactions
 - 7.4. Completed Fraction of Ist Order Reaction
 - 7.5. Summary of Kinetic Parameters of Ist Order Reactions
- 8. Second Order Reactions
 - 8.1. Case I. - When There is Only One Reactant
 - 8.2. Case II. When There are Two Different Reactants
 - 8.3. Units of k_2
 - 8.4. Examples of Second Order Reactions
- 9. Third Order Reactions
- 10. Reactions of Higher Orders
- 11. Half-Life Time of a Reaction
 - 11.1. $t_{1/2}$ For A First Order Reaction
 - 11.2. Reactant Left After n Half Lives For A First Order Reaction
 - 11.3. $t_{1/2}$ For A Second Order Reaction

- 11.4. $t_{1/2}$ For A Third Order Reaction
- 11.5. $t_{1/2}$ of Zero Order Reactions
- 11.6. Dependence of $t_{1/2}$ Upon Initial Concentration of A Single Reactant (A Summary)
- 12. Methods For Determining The Order of A Reaction
 - 12.1. The Use of Differential Rate Expressions. Hit and Trial Method
 - 12.2. The Use of Integral Rate Expressions
 - 12.3. Graphical Method
 - 12.4. The Half-Life Method
 - 12.5. Ostwald's Isolation Method
- 13. Molecularity of A Reaction
 - 13.1. Order and Molecularity of Simple Reactions
 - 13.2. Order and Molecularity of Complex Reactions
- 14. Radioactive Decay
 - 14.1. Units of k
 - 14.2. Amount of Radioactive Substance Left
 - 14.3. Amount of Radioactive Substance Left in Terms of $t_{1/2}$
 - 14.4. Half Lives of Some Radioactive Isotopes
 - 14.5. Average Life
- 15. Experimental (Instrumental) Methods to Study Kinetics
 - 15.1. Optical Methods
 - 15.2. Spectroscopic Method
 - 15.3. Electrical Conductivity Method
 - 15.4. Potentiometric Method
- 16. Effect of Temperature on Reaction Rates
 - 16.1. Concept of Activation Energy
 - 16.2. Effect of Catalyst
 - 16.3. Calculation of Energy of Activation, The Arrhenius Equation
- 17. Theories of Reaction Rates
 - 17.1. Simple Collision Theory Based Upon Hard Sphere Model, Between Dissimilar Molecules
 - 17.2. Collision Theory of Bimolecular Reactions Between Similar Molecules
 - 17.3. Comparison of The Experimental and Theoretical k_2 Values
 - 17.4. Activated Complex Theory (ACT) of

- Bimolecular Reactions
- 17.5. Eyring Equation for Reactions in Solution
- 17.6. Comparison of The ACT with Collision Theory
- 17.7. The Lindemann Theory of Unimolecular Reactions

18. Scope of Chemical Kinetics
 Summary
 Questions and Problems

8. CATALYSIS

1-24

- 1. Catalysis
- 2. Auto-Catalysis
- 3. Promoters
- 4. Negative Catalysts
- 5. General Characteristics of Catalytic Reactions
- 6. Types of Catalysis
- 7. Theories of Homogeneous Catalysis
 - 7.1. Formation of Reactive Intermediate
 - 7.2. Acid-Base Catalysis
- 8. Enzyme Catalysis
 - 8.1. Enzyme
 - 8.2. Significance of k_m and v_{max}
- 9. Heterogeneous Catalysis
 - 9.1. Heterogeneous Catalysis Involving Solid Reactants
 - 9.2. Heterogeneous Catalysis Involving Liquid Reactants
 - 9.3. Heterogeneous Catalysis Involving Gaseous Reactants
- 10. Theories of Heterogeneous Catalysis
 - 10.1. The Chemical Theory
 - 10.2. The Adsorption Theory
- 11. Miscellaneous Examples of Catalysts
 - 11.1. Lindlar Catalyst
 - 11.2. Adam's Catalyst
 - 11.3. Palladium Catalyst
 - 11.4. Ziegler-Natta Catalyst, Karl Ziegler and Giulio Natta
 - 11.5. Catalytic Converters
 - 11.6. Phase Transfer Catalysis and Catalyst Aliquat-336

Summary
 Questions and Problems
